DETAILED ACTION

This Office action is in response to the amendment filed March 15, 2006 in which claims 28-45 were canceled and claims 82-91 were added.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 46-53, 55-63, 65-80 and 82-91 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 25-50, 52-60 and 62-77 of copending Application No. 10/084,602. Although the conflicting claims are not identical, they are not patentably distinct from each other because the diesel fuel additive and composition of the present invention is with the broad scope of the fossil fuel additive and composition of the copending application. A diesel fuel is a species of fossil fuels.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 53, 63, 70 and 80 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are rejected because they contain improper Markush language. The rejected language is "selected from the group selected from".

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 46-48 and 51 are rejected under 35 U.S.C. 102(b) as being anticipated by Finnan (US 4,504,499).

Finnan teaches a heat-stabilized carotenoid-colored edible oil comprising stabilizing amounts of at least one of the following antioxidants (thermal stabilizers): lauryl thiodipropionate, dilauryl thiopropionate, a tocopherol and mixtures thereof (see abstract). The edible oil may be wheat-germ oil (see col. 2, lines 55-65) and the carotenoid may be beta-carotene or lycopene (see col. 1, lines 48-60; Example 1). The

carotene is suspended in an edible oil such as peanut oil (diluent or thermal stabilizer)(see col. 3, lines 62-65). Finnan is not directed to a fuel additive; however, intended use is given no patentable weight in claims that are directed to the composition per se.

Accordingly, Finnan teaching all the limitations of the claims anticipates the claims.

7. Claims 46-48, 51, 53 and 86 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujiwara (US 5,705,526).

Fujiwara teaches a composition comprising lycopene, beta-carotene, alpha-carotene, d,l-tocopherol and a mixture of wheat-germ oil and a vegetable oil (see abstract). Fujiwara also teaches that the composition may comprise a solvent and a dispersant (see col. 3, lines 51—56). The carotene of the example is dispersed in palm oil (diluent or thermal stabilizer)(see col. 5, line 2). Fujiwara is not directed to a fuel oil additive. However, intended use is given no patentable weight in claims that are directed to the composition per se.

Accordingly, Fujiwara teaching all the limitations of the claims anticipates the claims.
